## Table of Contents

- [array\\_change\\_key\\_case](#) — Changes the case of all keys in an array
- [array\\_chunk](#) — Split an array into chunks
- [array\\_column](#) — Return the values from a single column in the input array
- [array\\_combine](#) — Creates an array by using one array for keys and another for its values
- [array\\_count\\_values](#) — Counts all the values of an array
- [array\\_diff\\_assoc](#) — Computes the difference of arrays with additional index check
- [array\\_diff\\_key](#) — Computes the difference of arrays using keys for comparison
- [array\\_diff\\_uassoc](#) — Computes the difference of arrays with additional index check which is performed by a user supplied callback function
- [array\\_diff\\_ukey](#) — Computes the difference of arrays using a callback function on the keys for comparison

- [array\\_diff](#) — Computes the difference of arrays
- [array\\_fill\\_keys](#) — Fill an array with values, specifying keys
- [array\\_fill](#) — Fill an array with values
- [array\\_filter](#) — Filters elements of an array using a callback function
- [array\\_flip](#) — Exchanges all keys with their associated values in an array
- [array\\_intersect\\_assoc](#) — Computes the intersection of arrays with additional index check
- [array\\_intersect\\_key](#) — Computes the intersection of arrays using keys for comparison
- [array\\_intersect\\_uassoc](#) — Computes the intersection of arrays with additional index check, compares indexes by a callback function
- [array\\_intersect\\_ukey](#) — Computes the intersection of arrays using a callback function on the keys for comparison
- [array\\_intersect](#) — Computes the intersection of arrays
- [array\\_key\\_exists](#) — Checks if the given key or index exists in the array
- [array\\_keys](#) — Return all the keys or a subset of the keys of an array
- [array\\_map](#) — Applies the callback to the elements of the given arrays
- [array\\_merge\\_recursive](#) — Merge two or more arrays recursively
- [array\\_merge](#) — Merge one or more arrays
- [array\\_multisort](#) — Sort multiple or multi-dimensional arrays
- [array\\_pad](#) — Pad array to the specified length with a value
- [array\\_pop](#) — Pop the element off the end of array
- [array\\_product](#) — Calculate the product of values in an array
- [array\\_push](#) — Push one or more elements onto the end of array
- [array\\_rand](#) — Pick one or more random entries out of an array
- [array\\_reduce](#) — Iteratively reduce the array to a single value using a callback function
- [array\\_replace\\_recursive](#) — Replaces elements from passed arrays into the first array recursively
- [array\\_replace](#) — Replaces elements from passed arrays into the first array
- [array\\_reverse](#) — Return an array with elements in reverse order
- [array\\_search](#) — Searches the array for a given value and returns the corresponding key if successful
- [array\\_shift](#) — Shift an element off the beginning of array
- [array\\_slice](#) — Extract a slice of the array
- [array\\_splice](#) — Remove a portion of the array and replace it with something else
- [array\\_sum](#) — Calculate the sum of values in an array
- [array\\_udiff\\_assoc](#) — Computes the difference of arrays with additional index check, compares data by a callback function

- [array\\_udiff\\_uassoc](#) — Computes the difference of arrays with additional index check, compares data and indexes by a callback function
- [array\\_udiff](#) — Computes the difference of arrays by using a callback function for data comparison
- [array\\_uintersect\\_assoc](#) — Computes the intersection of arrays with additional index check, compares data by a callback function
- [array\\_uintersect\\_uassoc](#) — Computes the intersection of arrays with additional index check, compares data and indexes by separate callback functions
- [array\\_uintersect](#) — Computes the intersection of arrays, compares data by a callback function
- [array\\_unique](#) — Removes duplicate values from an array
- [array\\_unshift](#) — Prepend one or more elements to the beginning of an array
- [array\\_values](#) — Return all the values of an array
- [array\\_walk\\_recursive](#) — Apply a user function recursively to every member of an array
- [array\\_walk](#) — Apply a user supplied function to every member of an array
- [array](#) — Create an array
- [arsort](#) — Sort an array in reverse order and maintain index association
- [asort](#) — Sort an array and maintain index association
- [compact](#) — Create array containing variables and their values
- [count](#) — Count all elements in an array, or something in an object
- [current](#) — Return the current element in an array
- [each](#) — Return the current key and value pair from an array and advance the array cursor
- [end](#) — Set the internal pointer of an array to its last element
- [extract](#) — Import variables into the current symbol table from an array
- [in\\_array](#) — Checks if a value exists in an array
- [key\\_exists](#) — Alias of array\_key\_exists
- [key](#) — Fetch a key from an array
- [krsort](#) — Sort an array by key in reverse order
- [ksort](#) — Sort an array by key
- [list](#) — Assign variables as if they were an array
- [natcasesort](#) — Sort an array using a case insensitive "natural order" algorithm
- [natsort](#) — Sort an array using a "natural order" algorithm
- [next](#) — Advance the internal array pointer of an array
- [pos](#) — Alias of current
- [prev](#) — Rewind the internal array pointer
- [range](#) — Create an array containing a range of elements
- [reset](#) — Set the internal pointer of an array to its first element

- [rsort](#) — Sort an array in reverse order
- [shuffle](#) — Shuffle an array
- [sizeof](#) — Alias of count
- [sort](#) — Sort an array
- [uasort](#) — Sort an array with a user-defined comparison function and maintain index association
- [uksort](#) — Sort an array by keys using a user-defined comparison function
- [usort](#) — Sort an array by values using a user-defined comparison function
